Weekly Summary

This week our goal was to continue progress on out web app implementation. We created a use-case diagram for our project and continued setup of our webserver and rails app. We learned that there is some extra work that needs to be done in getting shibboleth properly configured with our ruby on rails app and plan to continue working on this next week. We plan to have a code jam at our next team meeting to work on troubleshooting issues together. We plan to revaluate whether we want to continue with shibboleth next week since getting it setup is taking so long.
